EDUCATION

San Jose State University

San Jose, CA

B.S. Computer Science

Expected May 2027

- **Coursework:** Data Structures & Algorithms, Operating Systems, Computer Architecture, Artificial Intelligence, Information Security, Databases, Web Programming, Machine Learning, Advanced Python Programming

EXPERIENCE

Axon Enterprise

May 2026 – Aug 2026

Software Engineering Intern

Seattle, WA

- Owned **end-to-end delivery** of a network segmentation feature for an enterprise healthcare customer, spanning **6 services** and **4 languages** (Scala, TypeScript/React, Thrift, SQL) with a feature-flagged production rollout.
- Built the **Scala** backend: database schema, transactional persistence layer, and a **backward-compatible Thrift API** enabling devices to be assigned network settings by group.
- Fixed a caching bug leaking network settings between devices, restructuring the encrypted cache so each device received only its intended configuration, with **zero downtime** on deploy.
- Traced intermittent production failures to a stale pod the load balancer kept routing to after deploys, then partnered with the platform team to correct the **Kubernetes** and **ArgoCD** configuration.
- Instrumented production monitoring with logging, metrics, and dashboards in **Splunk**, **OpenTelemetry**, and **Grafana**, giving the team real-time visibility post-launch.

Apple

Oct 2023 – May 2026

Product Specialist

San Jose, CA

- Drove **\$1M+** in sales by combining technical product knowledge, customer discovery, and solution-based recommendations across Apple hardware, software, and services
- Delivered tailored technology solutions for **150+** business and education customers, supporting Apple's Business Team through device recommendations, workflow guidance, and customer success
- Reduced issue resolution time by **20%** by streamlining troubleshooting workflows for software setup, device configuration, account issues, and product adoption

Headstarter AI

Jul 2024 – Sep 2024

Software Engineer Fellow

Remote, US

- Developed AI-powered full-stack applications with **Next.js**, OpenAI APIs, and backend services, shipping MVPs from product requirements through deployment in weekly engineering sprints
- Worked in a **3-person** engineering team to design APIs, debug production issues, and improve system reliability using Git, Agile workflows, CI/CD, and code review practices

PROJECTS

elafate.com | *TypeScript, NestJS, React, PostgreSQL, Prisma, OpenRouter, Docker*

- Founded and built an **agentic AI job-search platform** that turns a candidate profile into a ranked application pipeline, **ATS-scored** resumes, and a weekly execution roadmap via **LLM tool orchestration**
- Designed a **NestJS** agent harness exposing **45 typed tools** across resumes, applications, and planning, with **risk-tiered approval gates**, prompt-injection guards, and resumable **SSE** streaming
- Shipped **full-stack** features across **React 19** dashboards, **WorkOS** auth, scheduled job ingestion from **Greenhouse/Lever/Ashby**, and a **Chrome extension** autofilling applications on five ATS boards

SignConnect | *TypeScript, Python, OpenCV, MediaPipe, ElevenLabs*

- Built a **real-time ASL learning assistant** that combines hand tracking, conversational voice feedback, and live captions to make sign language practice more interactive and accessible
- Integrated **OpenCV** and **MediaPipe** to detect hand landmarks in real time and map gesture inputs into an interactive feedback loop for sign practice
- Designed a multimodal AI experience combining computer vision, speech interaction, and accessibility-focused UX, improving learner engagement through immediate visual and audio feedback

TECHNICAL SKILLS

Languages: Python, Java, Scala, TypeScript, JavaScript, Swift, C/C++, SQL

Frameworks/Libraries: React, Node.js, Express, FastAPI, SwiftUI, Apache Thrift, OpenCV, MediaPipe

Infrastructure/Observability: PostgreSQL, Docker, Kubernetes, AWS EC2, ArgoCD, Splunk, OpenTelemetry, Grafana, Statsig, Prisma

AI/ML: OpenRouter, Agentic AI Workflows, LangChain/LangGraph, TensorFlow, pandas, NumPy, PyTorch
